1. Source of Data

Statistics of exports are compiled from information appearing on customs export entries, except for data on electricity and on crude petroleum exported by pipeline. Since January 1, 1960, electricity exports are reported by the exporting firms through the National Energy Board, and since January 1964, oil exported by pipeline is reported by the pipeline companies direct to the Dominion Bureau of Statistics.

Statistics of imports are compiled from information appearing on customs import entries and invoices, except for data on electricity. Since January 1963, electricity imports are also reported by the importing firms direct to the Bureau.

2. Time Periods

Trade statistics for any period include all goods declared on customs entries received in the DBS during the calendar period in question and on electricity and pipeline reports received within twelve working days of the close of the calendar period. Most customs entries reach DBS within a week of the date the goods are cleared, although export entries for some water-borne shipments arrive much later. Electricity exports and imports are usually included in the statistics for the period during which these exports and imports actually occurred. Pipeline exports of crude petroleum are reported too late for inclusion in statistics for the month when these exports actually occurred; they are therefore included in statistics for the following month. Over the whole year, however, this makes little difference except in the case of the last month, i.e., December. Exports occurring in the month of December are included in the statistics for January following. In other words, exports of crude petroleum included in a given year are the actual exports occurring in December of the preceding year and in eleven months of the year concerned. The same process is repeated for other years so that in any given year the statistics for the same twelve months are included.

3. Coverage

- (a) **Domestic Exports:** Statistics of domestic exports include goods which are wholly produced in Canada and goods, previously included in import statistics, which have been changed in form by further processing in Canada and then exported.
- (b) **Re-exports:** Statistics, of re-exports include goods, previously included in import statistics which are exported from Canada in the same form as when imported. Minor operations such as sorting and repacking are not considered as changing the condition of imported goods.

Although there has been no change in the definition of re-exports, commencing January 1964, statistics of re-exports include exports from customs warehouses, which were previously excluded from this record. This parallels a change in import statistics, which from January 1964, include goods entered into customs warehouses rather than goods cleared from customs warehouses.

- (c) **Imports:** From January 1964, statistics of imports include substantially all goods which are cleared by customs immediately on arrival in Canada plus goods which are entered into customs warehouses rather than being cleared on arrival. Prior to January 1964, import statistics included goods cleared immediately on arrival plus goods cleared for consumption out of customs warehouses. The two types of record eventually cover

1. Source des données

Les statistiques sur les exportations sont établies à partir des documents d'exportation recueillis par les Douanes, sauf dans le cas des données sur l'électricité et le pétrole brut exporté par oléoduc. À compter de janvier 1960, les exportations d'électricité sont fournies par les compagnies exportatrices par l'entremise de l'Office national de l'énergie tandis que depuis janvier 1964, les compagnies exportatrices de pétrole par oléoduc fournissent directement leurs rapports au Bureau fédéral de la statistique.

Les statistiques sur les importations sont établies à partir des déclarations en douane et des factures d'importation recueillies par les Douanes, sauf dans le cas des données sur l'électricité. À compter de janvier 1963, les compagnies importatrices d'électricité fournissent directement leurs rapports au Bureau fédéral de la statistique.

2. Périodes

Les statistiques sur le commerce des marchandises pour une période quelconque visent la totalité des marchandises déclarées dans les documents de douanes parvenus au B.F.S. durant la période civile observée et dans les rapports sur l'électricité et le pétrole par oléoduc reçus dans les douze premiers jours ouvrables qui suivent la période. Dans la plupart des cas, les déclarations des douanes parviennent au B.F.S. dans la semaine suivant le dédouanement des marchandises. Cependant, la transmission des déclarations de certaines exportations par voie maritime prend beaucoup plus de temps. Les exportations et les importations d'électricité sont généralement incluses dans les statistiques couvrant la période au cours de laquelle ces exportations et importations ont effectivement eu lieu. Les déclarations des exportations de pétrole brut par oléoduc qui ne parviennent pas à temps pour être incluses dans les statistiques du mois au cours duquel elles ont eu lieu figurent dans les statistiques du mois suivant. Si l'on prend une année complète, ce décalage ne se fait sentir que le dernier mois, c'est-à-dire que les chiffres de décembre n'apparaissent que dans les statistiques du mois de janvier suivant. En d'autres termes, les statistiques des exportations de pétrole brut d'une année couvrent, en réalité, les exportations du mois de décembre de l'année précédente et des onze premiers mois de l'année observée. Ce fait se produisant tous les ans, les statistiques couvrent toujours la même période de douze mois.

3. Couverture

- (a) **Exportations nationales:** Les statistiques des exportations nationales couvrent les produits canadiens et les marchandises entièrement fabriquées au Canada, ainsi que des marchandises importées et qui, à ce titre, figurent dans les statistiques des importations, qui sont exportées après transformation au Canada.
- (b) **Réexportations:** Les statistiques des réexportations couvrent les marchandises importées et qui, à ce titre, figurent dans les statistiques des importations, qui sont exportées du Canada dans l'état où elles étaient lors de leur importation. On ne considère pas que les manipulations secondaires comme le triage ou le conditionnement modifient l'état des marchandises importées.

Bien que la définition du terme "réexportation" n'ait pas été modifiée, depuis janvier 1964, les statistiques des réexportations couvrent les exportations en provenance des entrepôts en douane, qui n'étaient pas comprises dans les exportations auparavant. Il en est de même pour les statistiques des importations qui, depuis janvier 1964, couvrent les entrées de marchandises dans les entrepôts en douane et non plus les sorties de marchandises dédouanées des entrepôts en douane.

- (c) **Importations:** Depuis janvier 1964, les statistiques des importations comprennent à peu près toutes les marchandises dédouanées dès leur arrivée au Canada et les marchandises entreposées en douane au lieu d'être dédouanées à leur arrivée. Avant janvier 1964, les statistiques des importations couvraient les marchandises dédouanées dès leur arrivée et les marchandises entreposées en douane à mesure que les prélèvements étaient dédouanés. Les

the same totals, except for a small amount of goods which is entered into customs warehouses and then re-exported. There may, however, be an important difference in the time at which warehoused goods are recorded as imports; some shipments which enter customs warehouses remain there for several months before clearance.

- (d) **Exclusions:** The following commodity movements are excluded from both export and import statistics (some are recorded separately as Special Transactions - Non-trade): gold and gold products where the value of the gold content is 80 per cent or more of the total value (a small amount of gold scrap in the form of jewellers' sweepings is included in export class 256-99 and import class 258-99); current coin; settlers' effects; private donations and gifts; tourist purchases (only those exempt from duty are excluded from import statistics); goods moving to or from Canadian armed forces or diplomats abroad, or to or from the forces of our NATO allies or foreign diplomats in Canada; temporary shipments of goods for exhibition or competition (and film moving for exhibition or processing); bunker supplies and ships' stores sold to foreign vessels or aircraft in Canadian ports, or purchased by Canadian vessels or aircraft abroad; generally, all other temporary and transit movements.

Import statistics also exclude ships of British construction and registry imported for use in Canada, and ships and aircraft purchased for use as international carriers but not used to carry goods between points in Canada.

4. Countries Credited

Exports are credited to the country to which they are consigned at the time the goods leave Canada, i.e., to the furthest known destination of the goods.

Imports are credited to the country from which the goods were first directed to Canada, except for goods of Central or South American origin consigned to Canada from the United States; in these cases, the goods are credited to the country of origin.

deux méthodes conduisent en fin de compte au même total; la seule différence provient de la faible proportion des marchandises qui sont entreposées en douane puis réexportées. Toutefois, il peut y avoir de très grands écarts de temps entre l'entrée des marchandises dans les entrepôts en douane et leur déclaration comme importations; certaines expéditions entreposées en douane y restent pendant plusieurs mois avant d'être dédouanées.

- (d) **Exclusions:** Les mouvements de marchandises suivants sont exclus des statistiques des exportations et des importations (certains de ceux-ci sont classés séparément comme "transactions spéciales - non commerciales"): l'or et les articles en or, lorsque la valeur de la teneur en or représente 80 p. 100 ou plus de la valeur totale (une petite quantité de débris d'or sous forme de balayure de bijoutiers est incluse dans la classe d'exportation 256-99 et dans la classe d'importation 258-99); la monnaie courante; les effets des immigrants; les dons et cadeaux privés; les achats des touristes (seuls les articles exempts des droits de douane lors de leur importation sont exclus de la statistique des importations); les marchandises expédiées aux forces armées et aux diplomates du Canada à l'étranger, ou celles qui sont expédiées par ces personnes; les marchandises expédiées aux forces armées de nos alliés de l'OTAN et aux diplomates étrangers au Canada ou celles qui sont envoyées au Canada par ces personnes; les expéditions provisoires de marchandises pour les expositions et les concours (et les films expédiés en vue de leur projection ou de leur développement); les approvisionnements de soutes et de navire vendus aux navires ou aéronefs étrangers dans les bureaux canadiens ou achetés par des navires ou aéronefs canadiens à l'étranger; en général, tous les autres mouvements temporaires et les marchandises en transit.

Sont également exclus des statistiques des importations les navires de construction et d'immatriculation britanniques importés en vue de leur usage au Canada et les navires et aéronefs achetés en vue d'être utilisés comme appareils de transport internationaux, mais non pour transporter des marchandises d'un endroit à l'autre au Canada.

4. Pays de destination

Les exportations sont portées au compte du pays destinataire au départ du Canada, c'est-à-dire du dernier destinataire connu.

Les importations sont portées au compte du premier pays où l'expédition a été faite à destination du Canada, sauf dans le cas des marchandises en provenance de l'Amérique centrale ou de l'Amérique du Sud qui sont expédiées au Canada à partir des États-Unis et qui sont comptées comme importées de leur pays d'origine.

5. Values

Export entries define the value of exports as the "actual amount received or to be received in terms of Canadian dollars, exclusive of all charges" such as freight, insurance, handling, etc. This definition would give values f.o.b. point of consignment for export, but in practice it is not always followed. For instance, in recent years a significant but indeterminate proportion of exports has been reported in United States dollars. This has resulted in some overstatement of the value of exports for the period prior to June 1961 and some understatement of their value in the subsequent period.

The value of goods imported is usually the value as determined for customs duty. In most cases, this corresponds to the value shown on the invoice accompanying the goods, converted to Canadian dollars at authorized rates of exchange (usually the commercial rate prevailing on the date when the goods were actually despatched to Canada). The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export, but in recent years importers have often reported c.i.f. values for free goods or goods subject to specific rates of duty. There is therefore some tendency for the value of these imports to be overstated. An effort is, however, made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January 1959); raw cotton and crude petroleum (from January 1962, retroactive to January 1960); raw sugar (from January 1963, retroactive to January 1961); and all shipments individually valued at \$100,000 or more (from January 1964). Only about one fifth of the value of imports is covered by these specific checks.

These valuation problems were revealed by studies connected with the introduction of the new commodity classifications for export and import statistics and by the sharp fall in the value of the Canadian dollar in 1961. Some action has since been taken to reduce the distortion of export and import values.

6. Ports

Tables 14 and 15 (trade by ports and provinces) show totals of the trade cleared by customs at individual customs ports. This does not imply that exports cleared at particular ports originated at those ports or even in the province in which the port concerned is located. Neither does it imply that imports cleared at particular ports were for consumption at those ports or even in the province in which the port is located. Interprovincial movements frequently occur before or after customs clearance.

7. Abbreviations

The letters "n.e.s." mean "not elsewhere specified".

8. Revisions

The data presented in this volume supersede those published in earlier issues of this volume. The detail of revisions is published on coloured pages inserted at the beginning of monthly export and import reports.

5. Valeur

Les documents d'exportations définissent la valeur des exportations comme "la somme réelle reçue ou à recevoir en dollars canadiens, à l'exclusion de tous les frais" (de transport, d'assurance, de manutention, etc.). Selon cette définition la valeur des exportations serait la valeur f. à b. point de destination, mais en réalité cette règle n'est pas toujours respectée. Par exemple, ces dernières années, une proportion notable mais dont on ne connaît pas le chiffre exact des exportations a été déclarée en dollars américains. Il en est découlé une certaine surestimation de la valeur des exportations au cours de la période antérieure à juin 1961 ainsi qu'une sous-estimation de leur valeur dans la période qui a suivi.

La valeur des marchandises importées est habituellement la valeur retenue pour le calcul des droits de douane. Dans la plupart des cas, elle correspond à la valeur indiquée sur la facture, après conversion en dollars canadiens au cours officiel (ordinairement le cours commercial en vigueur à la date à laquelle les marchandises ont été effectivement expédiées au Canada). La loi canadienne sur les douanes exige en général que la valeur des marchandises soit indiquée f. à b. point d'expédition du pays exportateur, mais, au cours des dernières années, les importateurs ont souvent déclaré la valeur c.a.f. dans le cas des marchandises exemptes de droits ou des marchandises auxquelles s'appliquent des taux de douane particuliers. Il existe donc une certaine tendance à surestimer la valeur de ces importations. Toutefois, on s'efforce de veiller à ce que la valeur f. à b. soit bien utilisée dans les statistiques des importations dans les cas suivants: marchandises sujettes aux droits de dumping (à partir de janvier 1969); coton brut et pétrole brut (à partir de janvier 1962, rétroactif janvier 1960); sucre brut (à partir de janvier 1963, rétroactif janvier 1961); et toutes les expéditions individuelles d'une valeur de \$100,000 ou plus (à partir de janvier 1964). Ces contrôles ne visent qu'environ un cinquième, en valeur, des marchandises importées.

Les problèmes de l'évaluation sont apparus lors des études sur l'adoption d'une nouvelle classification des marchandises pour la statistique des exportations et des importations et à la suite de la forte baisse du dollar canadien en 1961. Depuis, on a pris des mesures en vue de réduire les risques de fausser les chiffres relatifs à la valeur des exportations et des importations.

6. Ports

Les tableaux 14 et 15 (commerce suivant le port et la province) donnent les totaux des marchandises dédouanées dans chaque port douanier. Il ne faut pas conclure que les exportations dédouanées dans un port en particulier proviennent de cet endroit ni même de la province dans laquelle le port est situé. Par ailleurs, les importations dédouanées dans un port quelconque ne sont pas obligatoirement destinées à la consommation à cet endroit ni même dans la province où le port est situé. Les mouvements interprovinciaux surviennent souvent avant ou après le dédouanement des marchandises.

7. Abréviations

Les lettres "n.d.a." signifient "non dénommé ailleurs".

8. Rectifications

Le présent rapport annule et remplace les numéros précédents. Le détail des rectifications paraît aux pages de couleur au début des rapports annuels sur les exportations et les importations.

TREATMENT OF GOLD IN CANADIAN TRADE STATISTICS

The general use of gold as a money metal gives it special attributes which distinguish it from other commodities in trade. In particular, international movements of gold are determined largely by monetary factors and therefore may fluctuate widely from period to period owing to other than ordinary trade or commercial considerations. Also gold is generally acceptable; it does not have to surmount tariff barriers and is normally assured a market at a fixed minimum price.

Furthermore, physical movements of gold between countries have no direct or normal relation to sales and purchases. International transactions in gold often occur without its moving across any frontier, the sales or purchases in such cases being recognized by simply setting aside or "ear-marking" the gold in the vaults of a central bank. As trade statistics deal only with physical movements of commodities, they would not record all changes in stocks of gold under earmark. Yet such gold transactions would not be different in their economic nature from many physical shipments.

For these reasons movements of gold in a primary or semi-fabricated state have been excluded from published totals of Canada's commodity trade. From January 1, 1952, the standard of exclusion in use has been that suggested by the International Monetary Fund and the United Nations Statistical Office: all gold and gold products in which the value of the gold is 80 per cent or more of the total value are excluded. The only exception to this rule is the gold content of jewellers' sweepings which are included in the appropriate commodity classes (256-99 for exports and 258-99 for imports).

Since gold is produced in Canada primarily as an export commodity, a series showing new gold production available for export is prepared by the Bank of Canada and published monthly as a supplement to the trade statistics. This series is the equivalent of gold production in Canada exclusive of gold held by producers before the refining stage (whether at the mine, in transit, or at the Mint) and less any gold consumed by industry in Canada out of current production (normally a minor part of the total). Since November 1, 1951, the series has also excluded increases in commercial gold stocks held in safe-keeping by the Mint for the account of the mines.

Since March 21, 1956, mines not receiving aid under the Emergency Gold Mining Assistance Act have been allowed to sell their gold to private residents and non-residents, either for export or for safe-keeping in Canada. From April, 1956, such sales have been included in the figures for new gold production available for export.

The United States has been for many years the chief market for Canada's gold production, but such commercial exports of gold as now occur are normally directed to other markets.

For many years the only published series on gold trade was new gold production available for export. When the coverage of trade statistics was revised in 1960, records of physical movements of gold were added to the new category of "Special Transactions—Non-trade", and are now published in monthly and annual export and import reports. Statistics of new gold production available for export, as in the old series (Table I); and those of gold exports, as in the new series (Table II), are given in the following tables.

TRAITEMENT DE L'OR DANS LA STATISTIQUE DU COMMERCE DU CANADA

L'emploi général de l'or comme métal monétaire lui confère des attributs spéciaux qui le distinguent des autres denrées dans le commerce. Ainsi, en particulier, les mouvements internationaux d'or, étant largement déterminés par des facteurs d'ordre monétaire, peuvent beaucoup fluctuer d'une période à l'autre pour des raisons autres que les raisons ordinaires d'ordre commercial. En outre, l'or est généralement accepté; il n'a pas à surmonter les barrières tarifaires et trouve normalement marché à un prix minimum fixe.

De plus, les mouvements matériels d'or entre pays ne se rattachent pas directement ni normalement aux ventes et achats. Les opérations internationales intéressant l'or s'exécutent souvent sans que l'or franchisse la frontière; en pareil cas, les ventes ou achats sont reconnus simplement par la mise de côté ou "l'affectation" d'or dans les chambres fortes d'une banque centrale. Comme la statistique du commerce porte uniquement sur les mouvements matériels des denrées, elle ne saurait enregistrer tous les changements apportés à l'or ainsi affecté. Et pourtant, de telles opérations ne diffèrent pas au point de vue économique d'un grand nombre d'expéditions matérielles.

Voilà pourquoi les mouvements d'or brut ou semi-ouvré n'ont pas été publiés dans la statistique du commerce canadien de marchandises. Depuis le 1^{er} janvier 1952, la règle adoptée est celle qu'ont proposée le Fonds monétaire international et le Bureau de la statistique des Nations Unies: exclure tout l'or et tous les produits aurifères dans lesquels la valeur de l'or constitue 80 p. 100 ou plus de la valeur totale. Seule fait exception la teneur en or des balayures de bijoutier lesquelles sont classées dans les catégories appropriées de marchandises (classe 256-99 à l'exportation et classe 258-99 à l'importation).

Comme l'or est avant tout produit au Canada comme denrée d'exportation, la Banque du Canada prépare et publie à tous les mois comme supplément de la statistique du commerce, une série indiquant la production d'or neuf devant être exporté. Cette série équivaut à la production d'or au Canada, à l'exclusion de l'or détenu par les producteurs avant l'affinage (à la mine, en cours de route ou à la Monnaie) et de l'or consommé par l'industrie au Canada et prélevé sur la production courante (normalement une petite partie du total). Depuis le 1^{er} novembre 1951, la série a aussi fait exclusion des augmentations de stocks d'or gardés en sûreté par la Monnaie pour le compte des mines.

Depuis le 21 mars 1956, les mines qui ne reçoivent pas d'aide en vertu de la loi d'urgence sur l'aide à l'exploitation des mines d'or, ont été autorisées à vendre leur or à des particuliers résidents ou non résidents, soit pour l'exportation, soit pour le conserver en sûreté au Canada. Depuis avril 1956, ces ventes ont été incluses dans les chiffres sur la production d'or neuf destiné à l'exportation.

Les États-Unis sont depuis plusieurs années le principal marché de l'or produit au Canada, mais les exportations commerciales d'or comme il en est aujourd'hui se dirigent normalement vers d'autres marchés.

Pendant plusieurs années, la production d'or neuf exportable constituait la seule série statistique publiée et visant le commerce de l'or. Quand, en 1960, on a modifié le champ d'application de la statistique du commerce, on a ajouté la statistique des mouvements matériels d'or à la nouvelle catégorie "Transactions spéciales—non commerciales"; ces chiffres paraissent aujourd'hui dans les rapports mensuels et annuels des exportations et importations. Les statistiques sur la production d'or neuf destiné à l'exportation, tout comme dans l'ancienne série statistique, sont données dans le premier tableau, tandis que les statistiques relatives aux exportations d'or, étant une nouvelle série statistique, paraissent dans le second tableau.

¹ Not available by countries. - Inconnus par pays.

² It is estimated that in 1966, duty was understated by 21.6 millions due to delays in the receipts of Customs documents from a major customs port; the data for 1967 have been adjusted downward by a like amount. Adjustments for both years are not available by countries. - On estime que le montant des droits signalé pour 1966 était trop faible de 21.6 millions, les documents douaniers d'un port de douane important n'étant pas parvenus en temps utile. Les résultats pour 1967 ont été minorés du même montant. Les minorations pour les deux années ne sont pas connues par pays.

**VALUE, PRICE AND VOLUME INDEXES
OF
EXPORTS AND IMPORTS**

Changes in the value of exports or imports between two periods may be caused by variations in the quantity or volume of goods exported or imported, by fluctuations in the prices at which trade is transacted, or by a combination of these factors. If the general level of prices should rise between two periods this will tend to increase the value of trade in the second period even in the absence of an increase in the volume of goods bought and sold. A decline in the price level will tend to depress trade values. Similarly, quantity changes may affect trade values in the absence of price change. When prices and quantities change in the same direction they will produce very sharp value changes in that direction. Finally prices and quantities may change in opposite directions, which may cause values to increase while quantities decrease or quantities to increase while values decrease. To assess the meaning of changes in the value of trade properly it is therefore necessary to know the individual influence of price and volume movements on the value totals.

Table 30 presents a comparison of the declared (statistical) values of domestic exports and imports in current dollars and in constant dollars, together with annual indexes of the declared values, prices and physical volume of Canada's trade. Tables 31-36 present the monthly record of the value, price and volume indexes published regularly in the Trade of Canada monthly reports. These indexes were set up on the interim reference base 1948=100 and computed on that basis pending conversion to a later base period which is under study. Annual record of indexes has been published from 1926 and monthly indexes are available for July 1947 on.

The indexes are computed in the following manner. The value index expresses the value of trade in a given period as a percentage of the value in the base period. The price index is of the fixed-weight aggregative (Laspeyres) type, and combines unit values calculated from the trade statistics with specified wholesale or other price quotations. These latter quotations are used where inadequate quantity reporting or insufficiently homogeneous items in the trade statistics prevent the obtaining of sufficiently representative unit value series. The volume index is then derived by dividing the value index by the corresponding price index, and is, therefore, of the currently-weighted (Paasche) type. The relationship between these series is thus multiplicative, not additive. The constant dollar values of Table 30 are computed by dividing the declared values by corresponding price indexes. As division by the published (Laspeyres) price indexes yields constant dollar values in which the groups do not sum to the total, a separate price index of the moving-current-weight (Paasche) type has been used in this computation.

**INDICES DE LA VALEUR, DES PRIX
ET DU VOLUME DES EXPORTATIONS
ET DES IMPORTATIONS**

Les changements de la valeur des exportations ou des importations d'une période à l'autre tiennent soit aux variations de la quantité ou du volume des marchandises exportées ou importées, soit aux fluctuations du prix pratiqué, soit à la conjugaison de ces deux facteurs. Si le niveau général des prix augmente d'une période à l'autre, la valeur du commerce de la seconde période aura tendance à augmenter même si le volume des marchandises achetées ou vendues n'augmente pas. Si le niveau des prix baisse, la valeur du commerce aura tendance à baisser. De même, les changements de la quantité peuvent, sans que les prix changent, modifier la valeur du commerce. Lorsque les prix et les quantités évoluent dans le même sens, il en résulte de très vifs changements de valeur dans ce sens. Enfin, les prix et les quantités peuvent évoluer en sens contraire et alors les valeurs augmentent tandis que les quantités diminuent ou bien les quantités augmentent tandis que les valeurs diminuent. Pour apprécier pleinement la portée des changements de la valeur du commerce, il faut donc connaître l'effet particulier du mouvement des prix et du volume sur la valeur totale.

Le Tableau 30 compare la valeur (statistique) déclarée des exportations domestiques et des importations en dollars valeur courante et en dollars valeur constante et donne les indices annuels de la valeur déclarée, des prix et du volume physique du commerce canadien. Les Tableaux 31-36 donnent les indices mensuels de la valeur, des prix et du volume publiés régulièrement dans les rapports mensuels portant sur le commerce du Canada. Ces indices ont été calculés d'après la période de base provisoire de 1948 établie à 100 et sont calculés sur cette base jusqu'à la conversion à une base plus récente; à l'étude. Une série annuelle d'indices à compter de 1926 a déjà paru et les indices mensuels à compter de juillet 1945 sont disponibles.

Voici comment sont établis les indices. L'indice de la valeur exprime la valeur du commerce d'une période donnée en pourcentage de la valeur de la période de base. L'indice des prix est un indice collectif à coefficient fixe (type Laspeyres) et combine les valeurs unitaires établies d'après la statistique commerciale avec certains prix de gros ou autres. Ces prix sont utilisés lorsque l'insuffisance de données quantitatives ou des articles insuffisamment homogènes dans la statistique commerciale ne permettent pas d'établir des séries de valeurs unitaires suffisamment représentatives. On obtient ensuite l'indice du volume en divisant l'indice de la valeur par l'indice des prix correspondant; l'indice du volume est donc un indice à pondération courante (type Paasche). Ces séries sont ainsi en rapport multiplicatif et non pas additif. On obtient les valeurs en dollars constants du Tableau 30 en divisant les valeurs déclarées par les indices des prix correspondants. Comme la division par les indices des prix publiés (Laspeyres) donne des valeurs en dollars constants dont les groupes, si on les additionne, ne correspondent pas avec le total, on a utilisé pour établir ce calcul, un indice des prix distinct à poids courant mobile (type Paasche).

TRADE BY THE STANDARD INTERNATIONAL TRADE CLASSIFICATION¹

Users of foreign trade statistics of more than one country have always been faced with serious difficulties arising from the limited comparability between such data, most countries having their own distinct statistical classifications of commodities. The League of Nations made an effort to solve this problem by suggesting as a basic classification its *Minimum List of Commodities for International Trade Statistics*. The League's work was resumed after the war under the direction of the United Nations Statistical Commission which, in 1950, approved the *Standard International Trade Classification*. National governments were urged to make use of the S.I.T.C., either by adopting it as a primary classification in compiling their trade statistics, or by converting national statistical data to it for international use. Canadian trade statistics are now converted to the S.I.T.C. and current data are published, along with the statistics of several other countries, in the United Nations *Commodity Trade Statistics* series.²

Statistics showing Canadian trade during the calendar years 1967 and 1968 on the basis of the S.I.T.C. are presented in the following table (37), with respect to trade with all countries, with the United Kingdom, and with the United States. It should be noted that in this table exports mean total exports (domestic plus re-exports) and that totals of imports differ from those appearing in other tables of this report by the exclusion of foreign coin, except gold, and repairs on ships and vessels.

The keys for converting Canada's export and import commodity statistics to the S.I.T.C. have been revised since the publication of the first indexed edition of the S.I.T.C. in April, 1953. The data for 1967 and 1968 appearing in Table 37 were compiled according to the revised keys, and therefore do not compare exactly with figures published in this table prior to 1953. The data have been compiled on the basis of the S.I.T.C. Revised (1961).

COMMERCE SELON LA CLASSIFICATION TYPE POUR LE COMMERCE INTERNATIONAL¹

La statistique du commerce extérieur de plus d'un pays a toujours présenté à ses utilisateurs de graves difficultés en raison de la comparabilité limitée des données, la plupart des pays ayant leur propre classification des marchandises. La Société des Nations, cherchant à résoudre le problème, avait proposé comme classification de base sa *Liste minimum de marchandises pour la statistique du commerce international*. Le travail de la Société a été repris après la guerre sous la direction de la Commission de statistique de l'Organisation des Nations Unies qui, en 1950, approuva la *Classification type pour le commerce international*. Les gouvernements nationaux furent priés de se servir de la C.T.C.I., soit comme classification de base dans l'établissement de leur statistique du commerce, soit en modifiant la présentation de leur statistique conformément à la nouvelle classification. Le Canada a déjà adapté sa statistique du commerce à la C.T.C.I., et les données courantes de même que celles de plusieurs autres pays sont publiées dans le bulletin des Nations Unies *Commodity Trade Statistics*².

Les statistiques du commerce canadien pour les années civiles 1967 et 1968 fondées sur la C.T.C.I., figurent au tableau qui suit (37) et analysent le commerce du Canada avec tous les pays, avec le Royaume-Uni et avec les États-Unis. On notera que dans ce tableau le terme "exportations" représente le total des exportations (exportations nationales et réexportations) et que les totaux des importations diffèrent de ceux d'autres tableaux du présent rapport par suite de l'exclusion de la monnaie étrangère, sauf l'or, et des réparations de navires et de vaisseaux.

Les explications sur la façon de ramener la statistique des exportations et des importations de marchandises du Canada à la C.T.C.I. ont été révisées depuis la publication de la première édition indexée de cette classification, en avril 1953. Les données pour 1967 et 1968 qui paraissent au tableau 37 ont été calculées d'après cette révision et, en conséquence, ne sont pas rigoureusement comparables aux chiffres du même tableau publiés avant 1953. Les données sont établies sur la base de la C.T.C.I., édition révisée (1961).

IMPORTS FROM CENTRAL AND SOUTH AMERICA

Until the middle of 1946, all imports were credited in Canadian trade statistics to the countries from which the goods were consigned to Canada. But beginning in July, 1946, a new method was adopted for crediting goods produced in Central or South America (including Bermuda and the West Indies) but consigned to Canada from the United States (and usually purchased in that country). This was to credit such shipments to the country in which the goods were originally produced.

At the time when this change was made its effect on Canadian trade statistics was minor. Under immediate post-war trading conditions almost all shipments of Central and South American goods were consigned to Canada from the country in which the goods were produced. With the return of more normal trading conditions a much greater proportion of these countries' goods has since come to be consigned to Canada from entrepôt markets in the United States.

A survey was begun in 1953 to determine the amount of imports credited to Central or South American countries which was actually consigned to Canada from the United States. Table 38 shows Canadian imports consigned from the country credited as well as those consigned from the United States but originating in a Central or South American country.

IMPORTATIONS DE L'AMÉRIQUE CENTRALE ET DE L'AMÉRIQUE DU SUD

Jusqu'au milieu de 1946, toutes les importations du Canada étaient attribuées dans la statistique du commerce du Canada aux pays d'où les marchandises étaient expédiées au Canada. A compter de juillet 1946, cependant, une nouvelle méthode a été adoptée à l'égard des marchandises produites dans l'Amérique centrale ou l'Amérique du Sud (y compris les Bermudes et les Antilles), mais expédiées des États-Unis au Canada (et habituellement achetées aux États-Unis), afin de les attribuer au pays où elles étaient originellement produites.

A l'époque où le changement a été opéré, la statistique du commerce du Canada s'en est peu ressentie. Au lendemain de la guerre alors que régnaient des conditions commerciales bien particulières, presque tous les envois de marchandises de l'Amérique centrale et de l'Amérique du Sud étaient expédiés au Canada à partir du pays même où elles étaient produites. Depuis le retour de conditions plus normales, une proportion beaucoup plus grande des marchandises de ces pays sont expédiées au Canada à partir des marchés américains où elles sont entreposées.

On a commencé un relevé en 1953 afin de déterminer le chiffre des importations attribuées aux pays de l'Amérique centrale ou de l'Amérique du Sud qui étaient en fait expédiées des États-Unis au Canada. Le Tableau 38 donne les importations canadiennes expédiées du pays auxquelles elles sont attribuées de même que les importations expédiées des États-Unis mais provenant des pays de l'Amérique centrale ou de l'Amérique du Sud.
